Quantitative analysis of complex protein mixtures using isotope-coded affinity tags. Application of programmable bio-nano-chip system for the quantitative detection of drugs of abuse in oral fluids. Hyaluronic acid was removed by ultracentrifugation and solid-phase extraction in order to enrich the sample in low molecular weight peptides. Moreover, the authors improved their investigations by focusing on a partic While it is highly desirable to have Frontiers in Biochip Technology suitable for early detection for effective management of CVD, the modern cardiac diagnostics area tends to focus on late-stage disease syndromes like acute myocardial infarction AMI and heart failure HF 37 Some investigations were also made in a mouse model of cartilage explants to respond to the increase use of genetically modified mouse model in arthritis research Wilson et al. In the later stages of disease, pain is felt not only at every movement and but also at rest. Wan-Li Xing and Dr. J Physiol
