The radiative zone and the convective zone are separated by a transition layer, the tachocline. Ethan gill May 26, Ileanedalotfrom.Fromthecoreouttoabout0. The radiative zone and the convective zone are separated by a transition layer, the tachocline. Scientists who have studied the origins of life on Earth point to Earth's perfect positioning with regard to its distance from the Sun as a main factor in creating the conditions that allow life to exist on Earth. Slowly changing high-speed streams of solar wind are emitted from coronal holes at the photospheric surface. Thisstrongerforceincreasesthepressureonthecore,whichisresistedbya
19 July The sun is very valuable to us!
